AS A  
MINNESOTA  
RATE PAYER YOU  
HAVE A VOICE! JOIN  
US TO SEND A CLEAR  
MESSAGE! NO-CAP-X  
HIGH VOLTAGE  
LINES.....

MOOO

Bring your friends and neighbors: anyone interested in learning about alternatives to the CapX high voltage transmission line planned for your neighborhood. Donations to support legal work of Citizens Energy Task Force.

### JOIN US AND;

- align with others who believe the CapX lines are the wrong kind, at the wrong time.
- demand an alternative to the CapX power lines.
- receive information on alternatives to the CapX lines.
- receive coaching with CETF attorney Paula Maccabee for citizens who want to speak up in public hearings .
- have a great time at the community dance.
- help fund the Citizens Energy Task Force legal work.

The decision on whether or not the CapX 2020 power lines will be built is a critical decision about Minnesota's energy future. Whether or not the power lines may cross their land, citizens concerned about rate increases, conservation, renewable energy, local jobs or the long-term ability of Minnesota to provide our own energy security have a lot at stake with the CapX projects.

### GOALS Of: Citizens Energy Task Force

- 1) To **stop** the **Cap-X** high voltage power lines unless the utilities can prove **they are needed and cost-effective**;
- 2) To **change the practice of eminent domain** by utilities so that **property owners are treated fairly** and **offered fair value** for any land taken for power lines or other utility infrastructure;
- 3) To **emphasize the importance of conservation** to **reduce the demand for energy** and **reduce the need to build** high voltage power lines;
- 4) To **promote clean, renewable energy** and reduce the likelihood that high voltage power lines will support the construction and operation of coal plants in Minnesota and neighboring states;
- 5) To **promote community-based renewable generation** throughout Minnesota not only to **reduce environmental impacts** and costs of power plants and power lines, but to **strengthen Minnesota's rural economy**;
- 6) To **minimize the environmental harm** of constructing power lines, including **climate change impacts**, damage to aesthetics and natural features, effects of electromagnetic fields and adverse impacts to farms and property; evidence and informed citizen input.

DO A DANCE FOR LOW-VOLTAGE!
